

ANSTO OPAL Reactor CNS Replacement

Wednesday, 29 November 2017 17:58 (6)

ANSTO is planning to replace the Cold Neutron Source (CNS) at the end of its design life. The project has a number of challenges due to the activity of the components. Working to ALARA principles and to minimise the reactor shutdown duration, a number of specialised tools and processes are being developed.

The topics that will be discussed in this presentation include the components to be replaced, computer modelling, tooling, mock-up, safety equipment, planning and training. In addition, some lessons have already been learnt and these lessons can be incorporated into future CNS designs.

Formal Invitation Letter Required

Primary author(s) : Mr ELTOBAJI, Andrew (ANSTO)

Co-author(s) : Mr BERMUDEZ, Walter (ANSTO)

Presenter(s) : Mr ELTOBAJI, Andrew (ANSTO)

Session Classification : Nibbles - Poster, Sponsors DENIM Challenge

Track Classification : Operations, User Support & Maintenance
