## **Synroc Waste Treatment Plant for fission-based Molybdenum-99 Production**

*Monday, 30 October 2017 12:15 (30)*

A new nuclear medicine facility is being built which will enable ANSTO to meet both domestic and global demand for Molybdenum-99. Co-located on the site will be an innovative waste treatment facility that deploys ANSTO's Synroc technologies; a waste form tailored for immobilizing all the waste elements and fission products and an integrated process line for converting intermediate level liquid waste into a solid compact via hot isostatic pressing (HIP), producing a durable waste form suitable for final disposal. This presentation will provide a high-level overview of the program, including various stages of development that are important in building this first of a kind nuclear waste treatment plant.

### **Summary**

**Primary author(s) :** Mr TRIANI, Gerry (ANSTO)

**Co-author(s) :** ABBOUD, Amanda (ANSTO); BIGRIGG, Ben (ANSTO); Dr CHAVARA, Dorji (Australian Nuclear Science and Technology Organisation); Dr VANCE, Eric R (ANSTO); Mr SMITH, Mitchell (ANSTO Synroc); SCALES, Nick (ANSTO); Mr HOLMES, Rohan (ANSTO)

**Presenter(s) :** Mr TRIANI, Gerry (ANSTO)

**Session Classification :** National & International Waste Management Programs: Session Chairs Greg Lumpkin & Simone Richter

**Track Classification :** Performance Assessment and geological disposal
